# Policies and Procedures

Today's world is absolutely full of electronics. Everywhere you turn... computer, automotive, phones multi-media, just to name a few. there are many great job opportunities for those who have a technical background and new jobs are opening at a rapid pace. These kits for learning electronics are the perfect place to start. An understanding of basic electronics will help in the students goals no matter which career path they may choose.

This catalog was created for electronics teachers, their respective students, and for Home-Study students. Many thousands of students over the past 30 years have been building our kits to learn electronics technology. Gibson Sales Systems offers hundreds of low-cost, high quality, electronics kits. Most of them come with full instructions, theory of operation and troubleshooting information. These kits were designed to aid the student in teh electronics learning process along the way to becoming an electronics technician or engineer, etc.

All products in this catalog are shown with their discounted wholesale prices. The students may refer to this catalog, and the website [www.GSSTechEd.com](http://www.GSSTechEd.com), to pick the kits they wish to build. Then, the instructor or school can place an order for the class. Technical Support to help the student must come from the instructor but we give free Tech-Support on products we manufacture as needed to the instructor and to Home-Study students enrolled in our program.

We hope you enjoy this large selection. We include in this catalog both kits that we manufacture as well as many quality kits from a variety of manufacturers worldwide.
